

# How are you handling Cybersecurity Risks?

The NIST Cybersecurity Framework provides a basic and understandable language of five key Functions— Identify, Protect, Detect, Respond, Recover – for managing risk iteratively over time.

## IDENTIFY

Develop organizational understanding to manage cybersecurity risk to systems, assets, data, and capabilities.

## PROTECT

Develop and implement the appropriate safeguards to ensure delivery of services.

## DETECT

Develop and implement the appropriate activities to identify the occurrence of a cybersecurity event.

## RESPOND

Develop and implement the appropriate activities to take action regarding a detected cybersecurity event.

## RECOVER

Develop and implement the appropriate activities to maintain plans for resilience and to restore any capabilities or services that were impaired due to a cybersecurity event.
